Slugfester!

FROM DEBATE TO SCORECARD

Evidence before verdicts.

The process starts by fixing what is being assessed - before anyone sees a score.

01 Define the debate

Check for duplicates. Identify the recording, speakers, event year and one **neutral question**. Record what each side must establish: its burden. A critic need not prove an alternative unless that burden is adopted.

02 Secure the complete source

Check transcript coverage, material gaps and speaker changes against the **full debate**. Use complete captions; transcribe if needed. Preserve timestamps and digital fingerprints that reveal later changes to the evidence.

03 Map the arguments, then lock the evidence

Identify important claims, replies, concessions and unanswered objections. Tie each selected **move** to an exact source passage, speaker, topic and relevant burden or reply. Explain unequal coverage: never invent symmetry or drop arguments just to fit the display.

FIXED BEFORE JUDGMENT

Section weights: total 100%.
Move importance: 1, 2 or 3.
Source, scope and assessment rules are frozen with the inventory.

04 Two isolated AI reviews

The administrative AI calls two independent AI agents to rate every selected move against the **same locked evidence**, with reasons. Neither sees prior scorecards, published commentary, winner labels or the other's judgments.

05 Resolve differences

Check audio whenever speaker attribution is below high confidence. A fresh independent **AI adjudicator, called by the administrative AI,** reviews flagged differences using source evidence and anonymous options. Undisputed numerical ratings use rounded means. Freeze the resolved record.

REVIEW TRIGGERS

Dimension gap **>8** points • Move-score gap **>4**
Adjustment gap **>2** • Relevant categorical differences

CONTROLLED INPUTS. NOT PERFECT OBJECTIVITY.

Reviewers and adjudicators are independent AI agents called by the administrative AI. Independence means separate AI contexts with controlled inputs, not necessarily different models. Shared model biases and mistakes can remain. Selection is curated, not representative.

Judgments become scores.

A score is earned move by move. Fixed rules turn the resolved ratings into section and overall scores.

06 Six dimensions, one move score

Every dimension is rated from 0 to 100.

25%	**Logical coherence**	Does the conclusion follow from its premises?
20%	**Evidence and warrant**	Is the support adequate and connected to the conclusion?
20%	**Responsiveness**	Does it answer the actual live challenge?
15%	**Relevance and burden**	Does it advance or challenge what must be established?
10%	**Precision and clarity**	Are terms, scope and qualifications clear?
10%	**Calibration and charity**	Is confidence justified, and the opposing argument represented fairly?

MOVE

Multiply each of the six ratings by its fixed weight, add them, then round to a whole number.

→

SECTION

For each side, average its move scores using their prelocked importance weights of 1, 2 or 3. Then round.

→

OVERALL

Take the section-weighted average. Add the burden-completion adjustment, then round. Keep the result within 0-100.

THE ONLY OVERALL ADJUSTMENT: -5 TO +5

An integer for consequential case completion not already counted in the moves. It cannot reward style or penalize the same defect twice. Section weights total 100% and cannot be tuned after judgment.

WORKED EXAMPLES Illustrations only, not actual debate results.

SECTION

Move scores **80** and **70**; importance **2** and **1**.

(80 × 2 + 70 × 1) ÷ 3 ≈ 76.67

Rounded section score **77**

OVERALL

Section scores **80** and **70**; weights **60%** and **40%**; adjustment **+2**.

48 + 28 + 2 =

A separate example, not a continuation of the left one. **78**

Calculate once. Then lock. Code derives the final totals; models do not author totals, and people do not hand-adjust them. Stability checks compare the result with both initial passes. Failed checks block acceptance rather than invite score tuning.

Slugfester!

FROM DEBATE TO SCORECARD

Explain. Challenge. Verify.

After the scores are locked, the work turns to clear explanations, careful labels and publication checks.

07 Explain the locked result

Publish every selected move exactly once, with accurate quotations and timestamps. Explain its **strongest feature, principal limitation, remaining burden and score**. Overall commentary identifies concrete strengths and material blunders for both sides. Explanations cannot change the locked scoring record.

08 Check fallacies and cognitive biases

After scores **and critiques** are locked, the administrative AI calls two independent AI agents to review every move using **LogFall** and **CogBias** definitions. Neither sees existing tags or the other's review. It calls a fresh independent AI adjudicator to decide **every candidate** raised by either agent.

EVERY MOVE
Complete coverage

→

TWO AI REVIEWS
Separate blind passes

→

ALL CANDIDATES
Either AI review agent

→

AI ADJUDICATION
Decide each candidate

LABELS NEVER ADD A SCORE PENALTY

A tag must identify a source-supported defect **already reflected in the critique**. A contested premise is not automatically circular reasoning; citing an expert is not automatically an appeal-to-authority fallacy. Distinct labels require distinct failures. **Finding no applicable labels is valid.**

09 Separate the AI contribution

Clearly label strengthened arguments and genuinely new ideas for both sides. Check that they add specific reasoning rather than recycled filler. These are **not statements by the speakers** and never affect participant scores. Biography research also stays outside judgment packets.

10 Verify before publication

Check evidence fingerprints, calculations, quotations, tag decisions and complete move coverage. Compare explanation depth with **25 earlier debates**, without targeting their scores or tag rates. Test desktop, mobile and keyboard access. Preserve the audit record; unresolved failures block publication.

WHAT THE SCORE MEANS

An estimate of the reasoning presented, **not the truth of a worldview or a person's worth**. Fame, applause and speaking polish earn no automatic bonus.

STANDARD ROUTE: ONE ADVOCATE PER SIDE

Panels are not forced into this method. Authorized two-team assessments use a separately disclosed approach; moves retain their actual speaker. **Team scores do not enter individual one-on-one averages.**
